Project Report

Project Dreamer- A online market place for freelancers.
We designed a project named "project dreamer". This project is based on market place design.We can create a good market for freelancers and sellers with our designed software. Freelance market place are now very reliable source for everyone. Firstly we designed our plans with a online software design platform named 'Figma'.Now I will describe my design step by step.

1st page- we just added our software name, a tagline and next page button in the 1st page.

2nd page-At the top of the screen we added back button and we added a wellcome massage. Then we added signin options for our consumers.Consumers can sign in or sign up with different option like facebook /google/Apple id. Then we added skip options for Viewers.

3rd page-we added search option for our users. Users can search Their desire services.
Then we added our services bellow. Then consumers can visit each of the services by Clicking inside. They can find their jobs here. Users will explore more more services day by day. In the bellow section we have added some options for our consumers.Home button,notifications,search button,exit button and lastly consumers profile.Everyconsumers have to build their good profile to get a good attention. They will get more reach or good value to their Customers and a good profile is aslo attractive to ranked freelancers.Our consumers can add their comment after their desire work. Consumers can edit their profile information from here.Can change their passwords.They can visit their recent and old works.
